MageINIC

CityRegionPostcode

- It's support only Magento 2 version
- This extension allows the store admin to manage(add, edit, delete) regions & cities & postcode, convert text-input city and postcode field to the select dropdown in checkout address (shipping & billing) & customer address pages for both storefront and backend.

Ultimate Guide for Magento 2 CityRegionPostcode

- Manage regions & cities & postcode easily via backend UI.
- Display city and postcode as a dropdown field with search option in the storefront (checkout shipping/billing address, customer address book).
- Display city and postcode as a dropdown field in the backend (customer edit address, edit order shipping/billing address & create new order shipping/billing address).

Experience the next level of testimonial management with our feature-rich extension, meticulously tailored to meet the specific requirements and expectations of your Magento 2 platform. Elevate customer trust, engagement, and conversion rates seamlessly.

How to install the extension

1. Upload via ZIP/Archive

- Back up your store's database and web directory
- Download the extension zip file and extract the zip file
- Transfer the **app** folder into the **Magento2 root** directory on the server
- Enable maintenance mode **php bin/magento maintenance:enable**
- Run the command **php bin/magento module:enable MageINIC_Core MageINIC_CityRegionPostcode**
- Run the command **php bin/magento setup:upgrade** to install the extension
- Run the command **php bin/magento cache:clean** to clean the cache
- Disable maintenance mode **php bin/magento maintenance:disable**
- Check the store environment if everything is working properly. If, at any point, the store displays an error, check the Magento logger for more details.
